This is my `package.json` for the module that I'm including in the parent project:

```json
{
  "version": "0.0.1",
  "name": "module-name",
  "dependencies": {
    "express": "3.3.4",
    "grunt": "0.4.1",
    "grunt-contrib-compass": "0.4.0",
    "grunt-contrib-copy": "0.4.1",
    "grunt-contrib-cssmin": "0.4.1",
    "grunt-contrib-jshint": "0.6.3",
    "grunt-contrib-requirejs": "0.4.1",
    "grunt-contrib-uglify": "0.2.2",
    "grunt-contrib-watch": "0.5.1",
    "grunt-express-server": "0.4.1",
    "grunt-karma": "0.4.5",
    "grunt-regex-replace": "0.2.5",
    "request": "2.25.0"
  },
  "scripts": {
    "postinstall": "grunt install"
  }
}
```

Co-usage libraries

One thing to note is that this module is contained in a private repo and I include it in the parent `package.json` like: `"module-name": "git+ssh://git@myserver:user/module-name.git"`

npm
